

Client Case Study

Client Name:

David Textiles, Inc.

Company Type:

Textiles Wholesaler

Project Title:

Server Refresh and Network Cleanup

Scope of Work:

Soft Point Media was contracted to procure and replace two aging file servers with new Dell PowerEdge 2900 III Series servers as well as replacing their aging UPS units. Because of the mission critical nature of the work and servers involved, all work had to be performed after-hours at night over a weekend. Over 600GB of data had to be transferred from the old servers to the new, in addition to a number of network roles including the primary Active Directory domain controller. Soft Point Media also elected to take advantage of the after-hours timeframe and rewire all of the other servers onsite, as well as installing a fully managed power infrastructure with new rack-mount PDU units.
